Test Writing Assignment

What to do:

1. Review the questions on your test that were correct.
   a. Were any correct because you guessed correctly?
   b. If so, what information would you need to make it so you would not have to guess again?

2. Review the questions on your test that were incorrect.
   a. Did you miss the problem because of some type of preventable error (numbers wrong in the calculator, marked B instead of C, read the question too fast, …)? If so, how do you plan to avoid this error for the future?
   b. Did you miss the problem because you did not know how to do the work?
      i. Get help if needed – be sure you learn how to do the problem for the final.
      ii. What definitions or procedures were needed?
      iii. How do you plan to get this problem correct in the future?

• Repeat 1 and/or 2 above as often as necessary for any given item on the test.
• Be sure to label your responses with the test question number: Question 1; Question 23; and so on.
• Don’t forget to put your name on the paper. 😊

What to turn in:

• The writing assignment, then the test, all stapled together.
